

FTS METTRAC NETWORK SOFTWARE

Mettrac Network Software is an advanced Data Management and Presentation package that collects environmental data, allows it to be graphed and included in reports.

- Turnkey package provides full support for data collection from FTS monitoring stations via GOES satellites.
- Easy access to current conditions and datalogger information.
- Integrated Crystal Reports TM allows for extensive reporting on raw weather station data. Includes numerous graphing options and data export to commonly used formats.

Other Features

- Full multi-language support featuring user customizable translation tables.
- Software is supplied with a stand-alone time- sync application that keeps your computer time accurate to GMT or your local time zone.
- Random pseudobinary decoding supported.
